Development Roadmap

We want to assure you that this app is only going to get better and better.

We will be constantly working on developments that will improve the user experience.

Here are a few developments that you will see in the short term:

1. **All Phone Type Compatibility**

Currently the App is for use on Tablets only. But we understand that some team members may prefer to track their data on their phone and save their tablet for the sales. Either way, we want to give your team choice. It doesn't matter what they use to track their data...as long as they are tracking it!!

2. **Functionality When Out Of Service**

If your team, for some reason, lose signal, Outcome Tracking App will not work. But we understand that sometimes there are issues with service and areas that have poor reception, so we will be added a cache feature that will allow the tracking to continue during these times.

3. **Improved Customisability**

Current customisability allows for the terminology of the sales process to be edited but future updates will allow for the number of steps in the process to be automated. We also aim to improve the level of choice around data viewing, giving the Directors visibility of what matters the most!

4. **Branch Out To Other Industries**

Please get in touch if you think this app would be suitable for your industry and we can start working on the framework.
